AURA ENERGY COMPLETES DRILLING PROGRAMME AT ITS WONDINONG URANIUM DEPOSIT

Aura Energy has completed the current phase of drilling at its Wondinong uranium deposit near Mt Magnet in Western Australia.

Aura commenced drilling in September, but had to delay the programme because of heavy rain. Results of the initial 31 drill holes were reported in November.

Aura resumed drilling in early December, and has now completed this programme. A total of 335 holes have been drilled in the prospective area of 20 square kilometres.

The holes were drilled to depths ranging from 2.0m to 40m, with the majority being 5.0m in depth.

Samples were collected at 0.5m intervals. Samples are presently being prepared for transport to the laboratory.

The downhole logging team is scheduled to be on site in early January.
